

What Is Claimed Is:

1. An instruction form retrieval apparatus comprising:
a storage part that stores user information and information on an instruction
form management apparatus holding an instruction form accessible to the user,
associated with each other;
an input part that inputs information on a user who instructs an instruction
form execution apparatus to execute processing indicated in the instruction form; and
a retrieval part that retrieves information on the instruction form management
apparatus holding the instruction form accessible to the user based on the information
on the user input by the input part.
2. The instruction form retrieval apparatus according to claim 1, further
comprising an output part that outputs information on the instruction form
management apparatus retrieved by the retrieval part to the instruction form execution
apparatus used by the user.
3. The instruction form retrieval apparatus according to claim 1, further
comprising an output part that outputs the information on the instruction form
management apparatus retrieved by the retrieval part to a terminal used by the user.
4. The instruction form retrieval apparatus according to claim 1, further
comprising an output part that outputs a command to the instruction form management
apparatus to transmit the instruction form accessible to the user to the instruction form
execution apparatus used by the user, based on the information on the instruction
form management apparatus retrieved by the retrieval part.

5. The instruction form retrieval apparatus according to claim 1, further comprising an output part that outputs a command to the instruction form management apparatus to transmit the instruction form accessible to the user to a terminal used by the user, based on the information on the instruction form management apparatus retrieved by the retrieval part.

6. The instruction form retrieval apparatus according to claim 2, wherein the information on the instruction form management apparatus output from the output part is information on the instruction form management apparatus holding the instruction form.

7. The instruction form retrieval apparatus according to claim 2, wherein the information on the instruction form management apparatus outputted from the output part includes information to discriminate the instruction form.

8. The instruction form retrieval apparatus according to claim 1, wherein user authentication is performed using the information on the user.

9. The instruction form retrieval apparatus according to claim 1, further comprising a display information generation part that generates information to display the retrieved information on the instruction form management apparatus.

10. An instruction form management system comprising:
an instruction form retrieval apparatus;
at least one instruction form execution apparatus; and
at least one instruction form management apparatus,
wherein the instruction form retrieval apparatus comprises:

a storage part that stores user information and information on the instruction form management apparatus holding an instruction form accessible to the user, associated with each other;

an input part that inputs information on a user who instructs the instruction form execution apparatus to execute processing indicated in the instruction form; and

a retrieval part that retrieves information on the instruction form management apparatus holding the instruction form accessible to the user based on the information on the user input by the input part.

11. An instruction form execution apparatus comprising:

an attachment part that attaches a storage medium, which is unique to a predetermined user, holding information on an instruction form management apparatus holding an instruction form accessible to the user;

an input part that inputs the instruction form accessible to the user from the instruction form management apparatus, based on the information on the instruction form management apparatus; and

an execution part that executes processing indicated in the input instruction form.

12. An instruction form management system comprising:

at least one instruction form execution apparatus;

a storage medium attached to the instruction form execution apparatus; and plural instruction form management apparatuses,

wherein the at least one instruction form execution apparatus comprises:

an attachment part that attaches a storage medium, which is unique to a predetermined user, holding information on each of the instruction form management apparatuses holding an instruction form accessible to the user;

an input part that inputs the instruction form accessible to the user from each of the instruction form management apparatuses, based on the information on each instruction form management apparatus; and

an execution part that executes processing indicated in the input instruction form.

13. An instruction form retrieval method comprising:
 - storing user information and information on an instruction form management apparatus holding an instruction form accessible to the user, associated with each other;
 - inputting the information on the user to execute processing indicated in the instruction form by an instruction form execution apparatus; and
 - retrieving information on the instruction form management apparatus holding the instruction form accessible to the user based on the inputted information on the user.

14. The instruction form retrieval method according to claim 13, further comprising outputting the retrieved information on the instruction form management apparatus to the instruction form execution apparatus used by the user.

15. The instruction form retrieval method according to claim 13, further comprising outputting a command to the instruction form management apparatus to transmit the instruction form accessible to the user to the instruction form execution apparatus used by the user, based on the retrieved information on the instruction form management apparatus.

16. An instruction form execution apparatus comprising:
 - a storage part that stores user information and information on an instruction

form management apparatus holding an instruction form accessible to the user,
associated with each other;

an input part that inputs the information on the user to execute processing
indicated in the instruction form by an instruction form execution apparatus;

a retrieval part that retrieves information on the instruction form management
apparatus holding the instruction form accessible to the user based on the information
on the user inputted by the input part; and

a processing part that executes the processing based on the instruction form
accessible to the user retrieved by the retrieval part.
